

## CONTENTS

<b>Preface .....</b>	i
<b>Marco Abate and Francesca Tovena</b>	
Formal normal forms for holomorphic maps tangent to the identity .....	1
<b>Assyr Abdulle</b>	
Multiscale methods for advection-diffusion problems .....	11
<b>M. Agrotis, S. Lafortune and P.G. Kevrekidis</b>	
On a discrete version of the Kortevég - De Vries equation .....	22
<b>Goro Akagi</b>	
Doubly nonlinear evolution equations and Bean's critical-state model for type-II superconductivity .....	30
<b>Sergei A. Avdonin and Boris P. Belinskiy</b>	
On the basis properties of the functions arising in the boundary control problem of a string with a variable tension .....	40
<b>Soohyun Bae</b>	
Positive entire solutions of inhomogeneous semilinear elliptic equations with supercritical exponent .....	50
<b>Lennard F. Bakker</b>	
Semiconjugacy of quasiperiodic flows and finite index subgroups of multiplier groups .....	60
<b>R. Bartolo, A. M. Candela and J. L. Flores</b>	
Timelike geodesics in stationary Lorentzian manifolds with unbounded coefficients .....	70
<b>R. Bartolo, A. M. Candela, J. L. Flores and A. Salvatore</b>	
Periodic trajectories in plane wave type spacetimes .....	77
<b>John V. Baxley, Mary E. Cunningham and M. Kathryn McKinnon</b>	
Higher order boundary value problems with multiple solutions: examples and techniques .....	84
<b>F. Berezovskaya and G. Karev</b>	
Bifurcations of self-similar solutions of the Fokker-Plank equations .....	91
<b>A. V. Borisov, A. A. Killin and I. S. Mamaev</b>	
Reduction and chaotic behavior of point vortices on a plane and a sphere ....	100
<b>A. V. Borisov, I. S. Mamaev and A. A. Killin</b>	
New periodic solutions for three or four identical vortices on a plane and a sphere .....	110
<b>M. T. Boudjelkha</b>	
Extended Riemann Bessel functions .....	121
<b>Gastão A. Braga, Frederico Furtado and Vincenzo Isaia</b>	
Renormalization group calculation of asymptotically self-similar dynamics ....	131
<b>Gunduz Caginalp and Christof Eck</b>	
Rapidly converging phase field models via second order asymptotics .....	142

<b>Dean A. Carlson</b>	
Finding open-loop Nash equilibrium for variational games .....	153
<b>Wenxiong Chen, Chao Jin, Congming Li and Jisun Lim</b>	
Weighted Hardy-Littlewood-Sobolev inequalities and systems of integral equations .....	164
<b>Xinfu Chen, Yuanwei Qi and Mingxin Wang</b>	
Steady states of a strongly coupled prey-predator model .....	173
<b>Zhangxin Chen, Qiaoyuan Jiang and Yanli Cui</b>	
Locking-free nonconforming finite elements for planar linear elasticity .....	181
<b>Rinaldo M. Colombo and Andrea Corli</b>	
Dynamic parameters identification in traffic flow modeling .....	190
<b>Monica Conti, Vittorino Pata and Marco Squassina</b>	
Singular limit of dissipative hyperbolic equations with memory .....	200
<b>E. N. Dancer and Zhitao Zhang</b>	
Critical point, anti-maximum principle and semipositone p-Laplacian problems .....	209
<b>Arnold Dikansky</b>	
Fitzhugh-Nagumo Equations in a nonhomogeneous medium .....	216
<b>Joshua Du and Jun Ji</b>	
An integral representation of the determinant of a matrix and its applications .....	225
<b>Mahmoud M. El-Borai</b>	
On some fractional differential equations in the Hilbert space .....	233
<b>Alan Elcrat and Ray Treinen</b>	
Numerical results for floating drops .....	241
<b>Khalil Ezzinbi, James H. Liu and Nguyen Van Minh</b>	
Periodic solutions in fading memory spaces .....	250
<b>Yuri N. Fedorov and Dmitry V. Zenkov</b>	
Dynamics of the discrete Chaplygin sleigh .....	258
<b>Wei Feng and Jody Hinson</b>	
Stability and pattern in two-patch predator-prey population dynamics .....	268
<b>Ilaria Fragalà, Filippo Gazzola and Gary Lieberman</b>	
Regularity and nonexistence results for anisotropic quasilinear elliptic equations on convex domains .....	280
<b>Michael Frankel and Victor Roytburd</b>	
Dynamical structure of one-phase model of solid combustion .....	287
<b>F. Gabern, W. S. Koon and J. E. Marsden</b>	
Spacecraft dynamics near a binary asteroid .....	297
<b>Cédric Galusinski and Mazen Saad</b>	
Water-gas flow in porous media .....	307
<b>Leszek Gasiński and Nikolaos S. Papageorgiou</b>	
Nonlinear hemivariation inequalities with eigenvalues near zero .....	317

<b>Arnaud Goulet, Ian Glasgow and Nadine Aubry</b>	
Dynamics of microfluidic mixing using time pulsing .....	327
<b>John R. Graef and Bo Yang</b>	
Multiple positive solutions to a three point third order boundary value problem .....	337
<b>E. V. Grigorieva and E. N. Khailov</b>	
Optimal control of a commercial loan repayment plan .....	345
<b>Daniel Guo and John Drake</b>	
A global semi-Lagrangian spectral model of shallow water equations with time-dependent variable resolution.....	355
<b>Scott W. Hansen and Rajeev Rajaram</b>	
Riesz basis property and related results for a Rao-Nakra sandwich beam .....	365
<b>Takahiro Hashimoto</b>	
Nonexistence of positive solutions of quasilinear elliptic equations with singularity on the boundary in strip-like domains .....	376
<b>Min He</b>	
A class of integrodifferential equations and applications .....	386
<b>Hiroshi Inoue</b>	
Magnetic hydrodynamics equations in moving boundaries .....	397
<b>Miklós Horváth and Márton Kiss</b>	
A bound for ratios of eigenvalues of Schrödinger operators on the real line .....	403
<b>Cheng-Hsiung Hsu and Suh-Yuh Yang</b>	
Traveling wave solutions in cellular neural networks with multiple time delays .....	410
<b>Ying Sue Huang and Chai Wah Wu</b>	
Stability of cellular neural network with small delays .....	420
<b>J. Húska, P. Poláčik and M. V. Safonov</b>	
Principal eigenvalues, spectral gaps and exponential separation between positive and sign-changing solutions of parabolic equations.....	427
<b>Gennaro Infante</b>	
Eigenvalues and positive solutions of ODEs involving integral boundary conditions .....	436
<b>Michinori Ishiwata</b>	
Existence of a stable set for some nonlinear parabolic equation involving critical Sobolev exponent .....	443
<b>Michael A. Jones and Diana M. Thomas</b>	
Nim-induced dynamical systems over $\mathbb{Z}_2$ .....	453
<b>S. Kanagawa, K. Inoue, A. Arimoto and Y. Saisho</b>	
Mean square approximation of multi dimensional reflecting fractional Brownian motion via penalty method .....	463
<b>N. I. Karachalios, H. E. Nistazakis and A. N. Yannacopoulos</b>	
Remarks on the asymptotic behavior of solutions of complex discrete Ginzburg-Landau equations.....	476

<b>Gregory P. Karev</b>	
Dynamics of heterogeneous populations and communities and evolution of distributions .....	487
<b>János Karsai and John R. Graef</b>	
Attractivity properties of oscillator equations with superlinear damping .....	497
<b>Paula Kemp</b>	
Characterizations of conditionally complete partially ordered sets .....	505
<b>Phillip Korman and Junping Shi</b>	
On Lane-Emden type systems .....	510
<b>Krystyna Kuperberg</b>	
2-wild trajectories .....	518
<b>Petr Kůrka</b>	
On the measure attractor of a cellular automaton .....	524
<b>Kousuke Kuto and Yoshio Yamada</b>	
Coexistence states for a prey-predator model with cross-diffusion .....	536
<b>K. Q. Lan</b>	
Properties of kernels and eigenvalues for three point boundary value problems .....	546
<b>Irena Lasiecka and Roberto Triggiani</b>	
Global exact controllability of semilinear wave equations by a double compactness/uniqueness argument .....	556
<b>Monica Lazzo and Paul G. Schmidt</b>	
Monotone local semiflows with saddle-point dynamics and applications to semilinear diffusion equations .....	566
<b>Dung Le</b>	
Partial regularity of solutions to a class of strongly coupled degenerate parabolic systems .....	576
<b>Shin-Yi Lee, Shin-Hwa Wang and Chiou-Ping Ye</b>	
Explicit necessary and sufficient conditions for the existence of a dead core solution of $P$ -Laplacian steady-state reaction-diffusion problem .....	587
<b>Aihua Li</b>	
An algebraic approach to building interpolating polynomials .....	597
<b>Gary M. Lieberman</b>	
A new regularity estimate for solutions of singular parabolic equations .....	605
<b>Chjan C. Lim and Da Zhu</b>	
Variational analysis of energy-enstrophy theories on the sphere .....	611
<b>Teck-Cheong Lim</b>	
On the largest common fixed point of a commuting family of isotone maps ...	621
<b>Weishi Liu</b>	
Geometric approach to a singular boundary value problem with turning points .....	624
<b>Kei Matsuura</b>	
Exponential attractors for 2D magneto-micropolar fluid flow in a bounded domain .....	634

<b>R. V. N. Melnik, B. Lassen, L. C. Lew Yan Voon, M. Willatzen and C.Galeriu</b>	
Accounting for nonlinearities in mathematical modelling of quantum dot molecules .....	642
<b>Emil Minchev</b>	
Existence and uniqueness of solutions of a system of nonlinear PDE for phase transitions with vector order parameter .....	652
<b>F. Minhós, T. Gyulov and A.I. Santos</b>	
Existence and location result for a fourth order boundary value problem .....	662
<b>Maria Grazia Naso</b>	
Controllability to trajectories for semilinear thermoelastic plates .....	672
<b>Igor Nazarov and Bai-Lian Li</b>	
Maximal sustainable yield in a multipatch habitat .....	682
<b>P.K. Newton</b>	
The dipole dynamical system .....	692
<b>Tomasz Nowicki and Grzegorz Świrszcz</b>	
Neutral one-dimensional attractor of a two-dimensional system derived from Newton's means .....	700
<b>Simone Paleari and Tiziano Penati</b>	
Equipartiton times in a Fermi-Pasta-Ulam system .....	710
<b>Chuang Peng</b>	
Minimum degrees of polynomial models on time series .....	720
<b>David W. Pravica and Michael J. Spurr</b>	
Unique summing of formal power series solutions to advanced and delayed differential equations .....	730
<b>Yuanwei Qi</b>	
Anomalous exponents and RG for nonlinear diffusion equations .....	738
<b>Rajeev Rajaram and Scott W. Hansen</b>	
Null controllability of a damped Mead-Markus sandwich beam .....	746
<b>Vassilis M. Rothos</b>	
Subharmonic bifurcations of localized solutions of a discrete NLS equation .....	756
<b>E. Sander, E. Barreto, S.J. Schiff and P. So</b>	
Dynamics of noninvertibility in delay equations .....	768
<b>Henri Schurz</b>	
Dissipation of mean energy of discretized linear oscillators under random perturbations .....	778
<b>Stephen P. Shipman and Darko Volkov</b>	
Existence of guided modes on periodic slabs .....	784
<b>Qin Sheng, David A. Voss and Abdul Q. M. Khaliq</b>	
An adaptive splitting algorithm for the Sine-Gordon equation .....	792
<b>Junping Shi and Ratnasingham Shivaji</b>	
Semilinear elliptic equations with generalized cubic nonlinearities .....	798

<b>LieJune Shiau and Roland Glowinski</b>	
Operator splitting method for friction constrained dynamical systems .....	806
<b>Irina F. Sivergina and Michael P. Polis</b>	
About global null controllability of a quasi-static thermoelastic contact system .....	816
<b>Milena Stanislavova</b>	
On the global attractor for the damped Benjamin-Bona-Mahony equation ....	824
<b>Jianjun Tian and Xiao-Song Lin</b>	
Colored coalescent theory .....	833
<b>Bourama Toni</b>	
Upper bounds for limit cycle bifurcation from an isochronous period annulus via a birational linearization .....	846
<b>Edward Della Torre and Lawrence H. Bennett</b>	
Analysis and simulations of magnetic materials .....	854
<b>Thomas I. Vogel</b>	
Comments on radially symmetric liquid bridges with inflected profiles .....	862
<b>Michio Urano, Kimie Nakashima and Yoshio Yamada</b>	
Transition layers and spikes for a reaction-diffusion equation with bistable nonlinearity .....	868
<b>Haiyan Wang</b>	
Positive radial solutions for quasilinear equations in the annulus .....	878
<b>Hwai-Chiuan Wang</b>	
Stability and symmetry breaking of solutions of semilinear elliptic equations ..	886
<b>J. R. L. Webb</b>	
Multiple positive solutions of some nonlinear heat flow problems .....	895
<b>Qinglan Xia</b>	
An application of optimal transport paths to urban transport networks .....	904
<b>X. Xiang, Y. Peng and W. Wei</b>	
A general class of nonlinear impulsive integral differential equations and optimal controls on Banach spaces .....	911
<b>Noriaki Yamazaki</b>	
Doubly nonlinear evolutions equations associated with elliptic-parabolic free boundary problems .....	920
<b>Suh-Yuh Yang and Cheng-Hsiung Hsu</b>	
Existence of monotonic traveling waves in modified RTD-based cellular neural networks .....	930
<b>Jian Zhai, Jianping Fang and Lanjun Li</b>	
Wave map with potential and hypersurface flow .....	940
<b>Chunlei Zhang, Qin Sheng and Rauél Ordóñez</b>	
Notes on the convergence and applications of surrogate optimization .....	947
